The Problem

404
Page not found

What do you do?
The workaround - Search it on a web archive!

However...

- A lot of people don’t know web archives exist
- Requires investment of time
- There are many different web archives to search

Web archives don’t get visited!
The solution - Arquivo404

Small javascript code intended to be implemented in a server’s 404 page.

It searches web archives and gives a link to the missing page!

Oops! That page can’t be found.

It looks like nothing was found at this location. Maybe try a search?

Visit an earlier version of this page on 31 July, 2017.
Win - Win - Win!

Websites  Users  Web archives
How to add Arquivo404 to a website?

You can simply add one line of code to your 404 page’s HTML:

```html
<script type="text/javascript" src="https://arquivo.pt/arquivo404.js" async defer
onload="ARQUIVO_NOT_FOUND_404.call();"></script>
```

Check the full documentation on arquivo.pt/arquivo404
How does it work?

Visit an archived version!
All web archives can use this!

Memento Protocol - RFC 7089

location.href

Any Memento compliant Web archive
